

Workshop Learning Objectives

As a result of this presentation the participant will be able to:

1. Describe and demonstrate the key components of evidence-based treatment for CAS, including principals of motor learning (PML)
2. Apply evidence-based treatment methods in actual clinical cases through clinical decision making activities
3. Identify appropriate, individualized therapy targets that facilitate motor learning and support functional communication and language development
4. Explain how to implement DTTC with various age groups, including very young children with suspected CAS
5. Explain characteristics, evaluation results, and treatment strategies to parents and caregivers of children with CAS to help them understand the nature of the disorder and actively engage in treatment.
